EOSIO is a free and open source blockchain software protocol that provides developers and entrepreneurs with a platform to build, deploy and run high performing blockchain applications

What is an account

- An account is a human readable name stored on the blockchain
- Every EOS account is 12 characters long and contains the characters a-z and 1-5
- An EOS account contains two keys, the active and owner key. The keys can have certain permissions to interact with dapps on the blockchain
